# Particle physics through the ages

**PERIODIC TABLE OF THE ELEMENTS**

Source: <http://www.kj-soft.de/periodic/>

Legend:

- Metals: Blue
- Nonmetals: Green
- Alkali metal: Yellow
- Alkaline earth metal: Orange
- Transition metals: Grey
- Lanthanide: Light blue
- Actinide: Light green
- Chalcogens element: Light green
- Halogens element: Yellow
- Noble gas: Light blue

Standard state (25 °C, 101 kPa):

- Na - gas
- Fe - solid
- Ga - liquid
- Ti - synthetic

# The building blocks of nature (the Standard Model)

“Everyday” stuff

1 GeV = mass of proton

**BOSONS** force carriers spin = 0, 1, 2, ...

Unified Electroweak spin = 1			Strong (color) spin = 1		
Name	Mass GeV/c <sup>2</sup>	Electric charge	Name	Mass GeV/c <sup>2</sup>	Electric charge
$\gamma$ photon	0	0	$g$ gluon	0	0
$W^-$	80.39	-1			
$W^+$	80.39	+1			
W bosons					
$Z^0$ Z boson	91.188	0			

# The building blocks of nature (the Standard Model)

BOSONS			force carriers spin = 0, 1, 2, ...		
Unified Electroweak spin = 1			Strong (color) spin = 1		
Name	Mass GeV/c <sup>2</sup>	Electric charge	Name	Mass GeV/c <sup>2</sup>	Electric charge
$\gamma$ photon	0	0	$g$ gluon	0	0
$W^-$	80.39	-1			
$W^+$	80.39	+1			
W bosons					
$Z^0$ Z boson	91.188	0			

1 GeV = mass of proton

# How the Z boson\* got its mass

symmetry: not just a magazine.

Symmetries of nature tell us about interactions and particles

But, they predict all the gauge bosons are massless, like the photon...a very different world from our's

Spontaneous symmetry breaking,  
the **Higgs mechanism**

\*and all elementary particles

# Higgs: the man, the mechanism and the particle

The man

The other men  
(Kibble, Guralnik, Hagen,  
Englert, Brout)

# Higgs: the man, the mechanism and the particle

Spontaneous symmetry breaking

Laws of nature are symmetric, our world has that symmetry hidden. Broken symmetry

# Higgs: the man, the mechanism and the particle

Spontaneous symmetry breaking

Laws of nature are symmetric, our world has that symmetry hidden. Broken symmetry

# Higgs: the man, the mechanism and the particle

The return of the aether

The Higgs has a “vacuum expectation value” (vev)  
Coupling of other particles to the Higgs (and its vev)  
give them mass

The bigger the mass the bigger the coupling

# Higgs: the man, the mechanism and the particle

The Higgs boson

Sole remaining piece of  
the Standard Model

**Guaranteed** to see it,  
or something like it, at  
Tevatron or LHC

# What do we know about the Higgs?

Couples to mass -- determines how it is made and how to look for it

# What do we know about the Higgs?

Couples to mass -- determines how it is made and how to look for it

# What do we know about the Higgs?

Couples to mass -- determines how it is made and how to look for it

# What do we know about the Higgs?

Couples to mass -- determines how it is made and how to look for it

95% confidence limit relative to the standard model

“amount of data”  $\sim 0.5 \times$  what has been collected so far

Q: How do you search for the Higgs boson?  
(hint:  $E = mc^2$ )

The Higgs is heavy, lives for  
a very short time, doesn't  
exist in nature  
Need to look at very small  
distances

Experimental  
physicist in the  
lab

# Q: How do you search for the Higgs boson?

## FERMIONS

matter constituents  
spin = 1/2, 3/2, 5/2, ...

### Leptons spin = 1/2

Flavor	Mass GeV/c <sup>2</sup>	Electric charge
$\nu_L$ lightest neutrino*	$(0-0.13)\times 10^{-9}$	0
$e$ electron	0.000511	-1
$\nu_M$ middle neutrino*	$(0.009-0.13)\times 10^{-9}$	0
$\mu$ muon	0.106	-1
$\nu_H$ heaviest neutrino*	$(0.04-0.14)\times 10^{-9}$	0
$\tau$ tau	1.777	-1

### Quarks spin = 1/2

Flavor	Approx. Mass GeV/c <sup>2</sup>	Electric charge
$u$ up	0.002	2/3
$d$ down	0.005	-1/3
$c$ charm	1.3	2/3
$s$ strange	0.1	-1/3
$t$ top	173	2/3
$b$ bottom	4.2	-1/3

## BOSONS

force carriers  
spin = 0, 1, 2, ...

### Unified Electroweak spin = 1

Name	Mass GeV/c <sup>2</sup>	Electric charge
$\gamma$ photon	0	0
$W^-$	80.39	-1
$W^+$	80.39	+1
W bosons		
$Z^0$ Z boson	91.188	0

### Strong (color) spin = 1

Name	Mass GeV/c <sup>2</sup>	Electric charge
$g$ gluon	0	0

# Searching for the Higgs boson

Higgs production is a rare process

Worse yet, its decay products can look like mundane events

# Searching for the Higgs boson

Higgs production is a rare process

Worse yet, its decay products can look like mundane events

# CERN and Fermilab - competitive collaboration

Ultimately LHC will have  $\sim 7\times$  Tevatron's energy  
Aids in discovering Higgs (and other new physics)  
Tevatron collides  $p\bar{p}$  and LHC collides  $pp$

Two machines complementary in approach and capabilities

Discovering the Higgs, and proving it is the Higgs is a long process, multiple sources of information are key

“Watching CERN discover the Higgs would be like watching your mother-in-law drive over a cliff.....”

Leon Lederman
